Summary

Frontend Developer with 1 year of professional experience building polished, production-ready web applications using React, Next.js, TypeScript, and modern frontend technologies. Experienced in developing admin dashboards, client-facing web applications, and landing pages, with a strong focus on UI quality, security, and maintainable architecture. Comfortable working with REST APIs, authentication and authorization, databases, Server Actions, and backend-for-frontend (BFF) patterns, with additional experience building backend projects and deploying applications on Linux VPS environments. Particularly attentive to UI details while applying an engineering mindset to security, architecture, and real-world application requirements.

Education

Homs University — Syria/Homs • Sep 2021 – Jun 2026
Software Engineering

Experience

BlueGateX — Remote · Full-time
Frontend Developer — Feb 2026 – May 2026

- Designed and implemented **30+ screens** for fintech e-wallet admin and agent dashboards using **Next.js, React, TypeScript, shadcn/ui, TanStack Query, and TanStack Table**.
- Architected a **monorepo** with shared authentication and UI components.
- Built core workflows for **KYC, user and wallet management, transactions, fee configuration, tier limits, and currency exchange**.
- Designed a **security-focused frontend architecture** using Server Actions, RBAC, secure Redis-backed sessions, and a data access layer.
- Worked as the primary frontend developer in a **cross-functional team** and delivered an additional e-commerce admin dashboard.

Freelance Frontend Developer — Remote
Frontend Developer — Jan 2026 – Present

- Designed and developed **3 responsive websites for Saudi clients (smartdifference.sa and diamonfont.net)**, handling UI design, frontend development, deployment, and SEO.
- Built **20+ screen admin dashboard** for NewPower to manage representatives, projects, and products, collaborating with backend and mobile developers.
- Implemented **authentication, authorization, and role-based UI**, with a focus on action-oriented UX.

Projects

Hudhod — AI-Powered Digital Presence Platform

- Built the frontend from scratch, delivering **20+ responsive screens**, reusable components, Arabic/English content, RTL support, and backend API integration.
- Independently completed as a **university graduation project**, representing the university at the **Alsafeer Exhibition**.
